Work Experience

Axion Orbital Space (YC W26), San Jose, CA (Remote) Jul 2026 – Oct 2026
Machine Learning Engineer Intern

- Benchmarked 8 open-weight LLMs and wrote the failover logic (rate-limit handling, auth fast-fail, deadlines); added guardrails, including a streaming filter and a check that removes AI-cited numbers that don't match the source data.
- Diagnosed 2 root causes of false Critical alerts on healthy farms (a zero-score cliff and pre-sowing soil in the averaging window); fixed both with a gradual penalty and added radar and weather fallbacks for cloud-blocked satellites.

Cognizant Technology Solutions, Pune, India May 2022 – May 2024
Programmer Analyst

- Traced recurring failures (Spark errors, delayed Kafka and file feeds, failed loads) to their root cause through logs and job dependencies, wrote Python fixes, and added monitoring to prevent repeats, reducing operational issues by 20%.
- Automated scheduling with a central Airflow DAG coordinating dependencies, retries, and alerts for 400+ production pipelines, using parameterized deployments across tables, dates, and environments.
- Coordinated with upstream, downstream, and client stakeholders on root causes and recovery, and shipped fixes, unit and integration tests, and business-calendar refreshes across 36 repositories via Jenkins CI/CD.
- Wrote Python, SQL, and PySpark data-quality checks for schema changes, duplicates, missing files, nulls, and source-to-target reconciliation before publishing partitioned Parquet data to Hive and AWS S3.
- Migrated 85+ tables (about 500 GB) from Hadoop to AWS (S3, EMR, Glue, Redshift) and deployed 20+ PySpark pipelines with automated schema discovery and file validation, running Airflow and legacy schedulers in parallel during cutover.
- Managed and monitored 100+ daily production pipelines processing 10M+ records per day for a banking client.

Projects

Project Uzima | GitHub Sep 2026

- Built the live phone workflow for an AI hospital-transfer prototype (FastAPI, Twilio speech, signed webhooks, gpt-oss-20b on AWS Bedrock); parallel agents confirm capability, beds, and readiness, ranking options by time to treatment.
- Fixed TwiML call failures, added graceful error handling, 3 regression tests, and read-back confirmation so unconfirmed availability is never shown; verified the handoff from hospital selection to a doctor-to-doctor call.

VisionStock | GitHub Feb 2026 – Apr 2026

- Created a retail shelf-monitoring system: a 12-endpoint FastAPI/PostgreSQL backend that checks detections against planograms, a Streamlit dashboard, and GCP Cloud Run deployment with health checks and a 4-stage fallback chain.
- Fine-tuned YOLOv8n on 78 training images across 34 retail classes, raising recall from 0.28% (pretrained COCO) to 11.79% at 68.4 ms p50 CPU inference.

FaithTrace | GitHub Jan 2026 – Apr 2026

- Developed a multimodal RAG platform that diagnoses why answers fail (FastAPI, Next.js, Celery/Redis, PostgreSQL, Qdrant), benchmarked on an 86-question eval set with 5 Ragas metrics.
- Raised version-correct evidence from 50% to 100% with date filters (30 questions, 2 runs), and table context recall (81% $\rightarrow$ 97%) and answer correctness (0.48 $\rightarrow$ 0.68) with table-aware parsing on 16 questions.

Technical Skills

Programming & Integrations: Python, TypeScript, JavaScript, SQL, FastAPI, Next.js, REST APIs, Webhooks, JWT
AI & Agents: LLM APIs, AWS Bedrock, Twilio, LangChain, RAG, Ragas, Pydantic, Claude Code, Cursor
Data & Backend: PostgreSQL, Redis, Celery, Qdrant, Airflow, PySpark, Kafka
Cloud & DevOps: AWS (S3, EMR, Glue, Lambda), GCP Cloud Run, Docker, Kubernetes, Jenkins, CI/CD, Git

Education

University of Colorado Boulder, Boulder, CO Aug 2024 – May 2026
Master of Science in Data Science, GPA: 3.9/4.0

G H Raisoni College of Engineering, Nagpur, India Aug 2018 – May 2022
Bachelor of Engineering in Information Technology

Hackathons

Healthcare AI Hackathon, AWS Builder Loft, San Francisco – 2nd Place & People's Choice Sep 2026
